

ALL WE
NEED
IS LESS

Welcome to EnerKey webinar:

Push data into EnerKey SaaS with the new EnerKey API

Our experts:

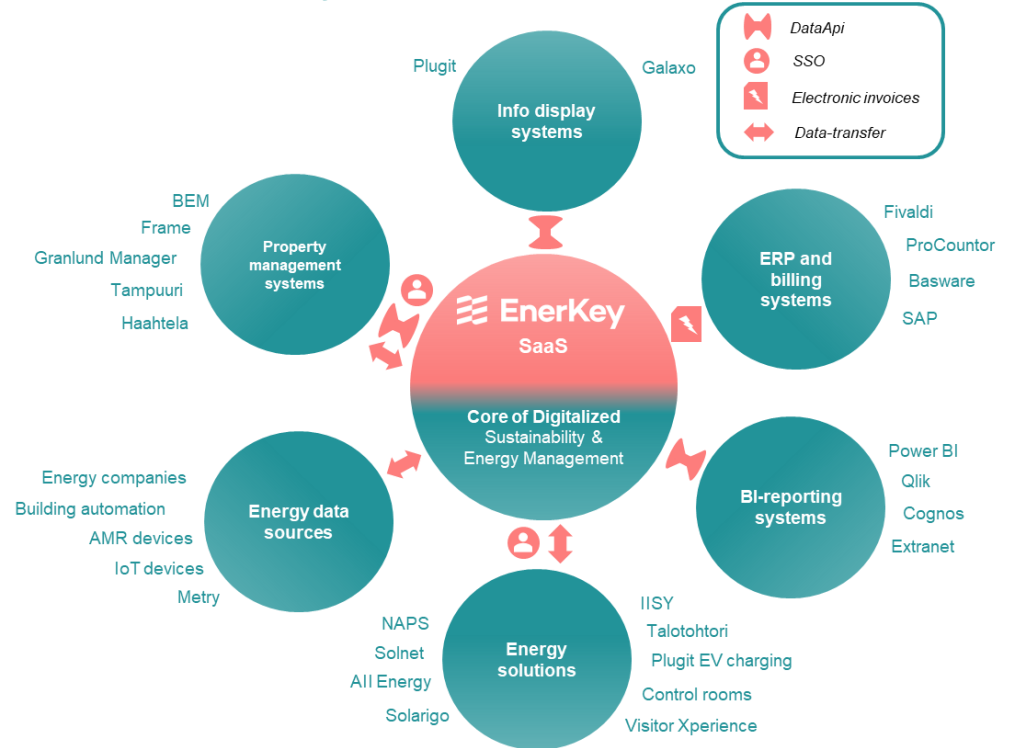

Juho Linsuri
Business Product Manager
EnerKey

Hanna Takkunen
Service Specialist
EnerKey

Integrations into other systems

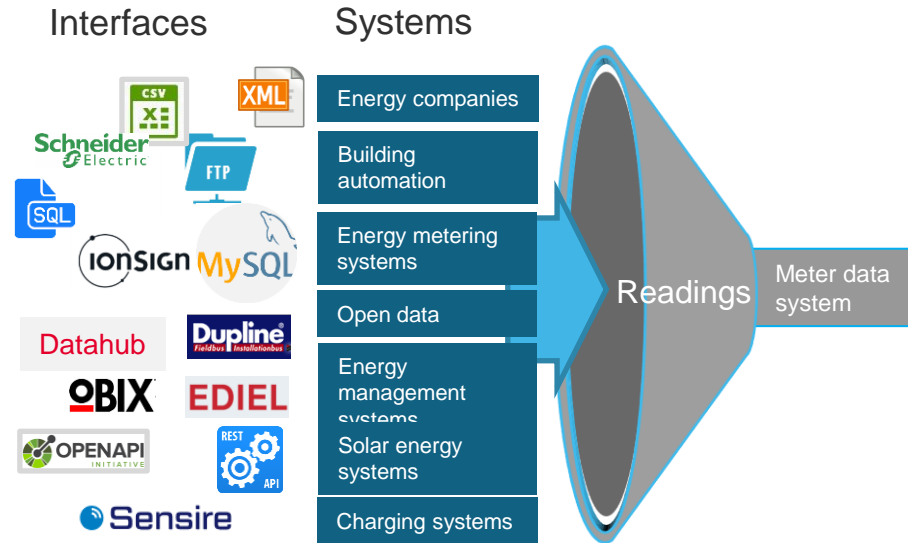

- Integration and cooperation with other systems and suppliers are among EnerKey's core values
- The purpose of integrations is to improve user experience and share existing data for different purposes
- With integrations, EnerKey's superior energy management tools can be seamlessly integrated into other maintenance systems

[More information on integrations](#)

Meter data collection

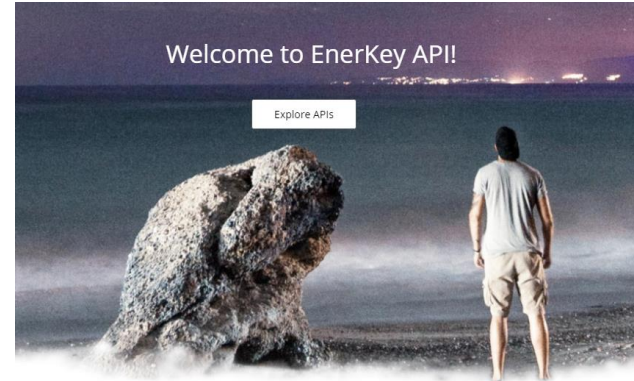

- EnerKey can utilise various different meter data sources – more than 80 integrations and interfaces that enable us to read more than 100,000 meters
- Meter data management and control are part of the EnerKey service
- Up-to-date list of recommended data sources can be requested from EnerKey Support.
- In the case your data source is not listed, you can make a connection via EnerKey Push API. See <https://developer.enerkey.com/>

EnerKey API and Push API

- **EnerKey API** is a programming interface which allows other systems to retrieve data from the EnerKey system
- It is divided in to four elements:
 - Consumption data
 - Alarms
 - Energy management
 - Consumption Window (Visualized data)
- EnerKey API can be used to import consumption data to the BI reports, information displays or ERP systems

- **EnerKey Push API** is a programming interface which allows other systems automatically bring in metering data to EnerKey system
- It can be used in the case you are having data sources that are not yet supported by EnerKey
- EnerKey has integration partner who can help you in connecting to Push API if needed
